ASIAN INSTITUTE OF MANAGEMENT

Machine Learning 3

Git and Python Environments

Supplementary Session

MSDS 2026

15 April 2026

ASIAN INSTITUTE OF MANAGEMENT

Supplementary Session

Goals

- To understand primary workflow of using Git and GitHub for providing version control for your code (ML3 and beyond)
- To setup Git in jojie and perform the workflow of using Git in jojie
- To showcase and familiarize some other features of Git and GitHub
- To be able to create python environments in jojie (or local machine)
    - To be able to utilize the GPU provided in jojie

Git Fundamentals

Git Fundamentals

What is Git?

Git is a **version control system** that tracks changes in your code or files over time.

https://www.linkedin.com/posts/mbaljeetsingh_git-is-a-version-control-system-that-is-activity-7007930814868959232-7xTd

Git Fundamentals

Why use Git (and GitHub)?

Git Fundamentals

Why use Git (and GitHub)?

Control and manage versions of your code – Git allows you to save meaningful versions of your code over time.

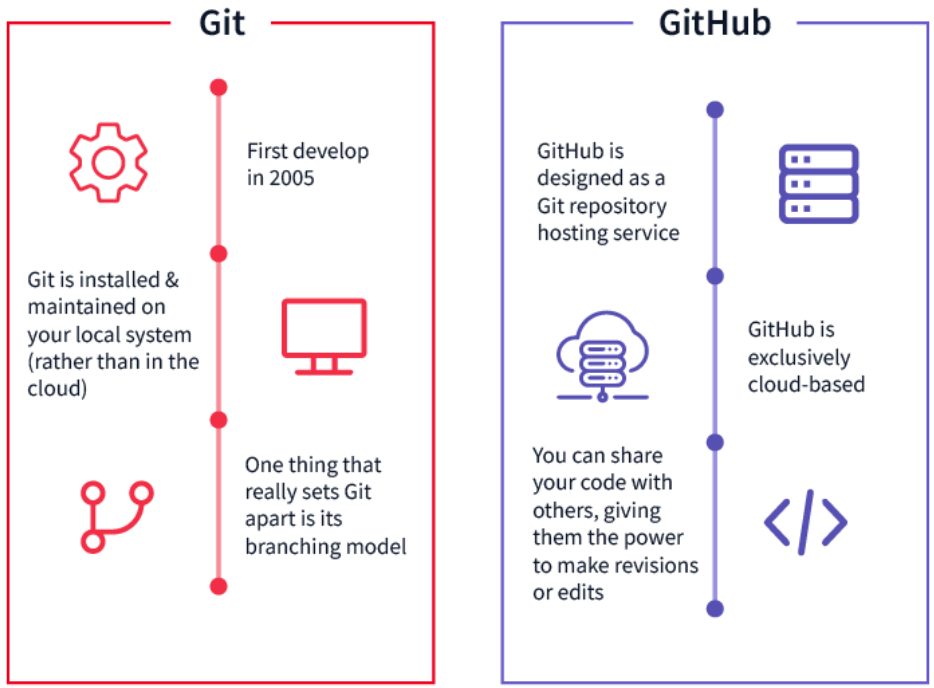
Share and showcase your work – Git makes your code easier to share with a wider audience.

Collaborate with others more effectively – Git makes it easier for teammates to review code, catch issues early, and work on the same project without accidentally overwriting each other's work.

Git Fundamentals

What is GitHub?

GitHub is a **cloud-based platform** for storing, sharing, and collaborating code. It allows you to host your Git repositories online, so they are backed up, accessible from anywhere, and easy to share with others.



SCALER Topics

https://www.scaler.com/topics/git-vs-github/

Git Fundamentals

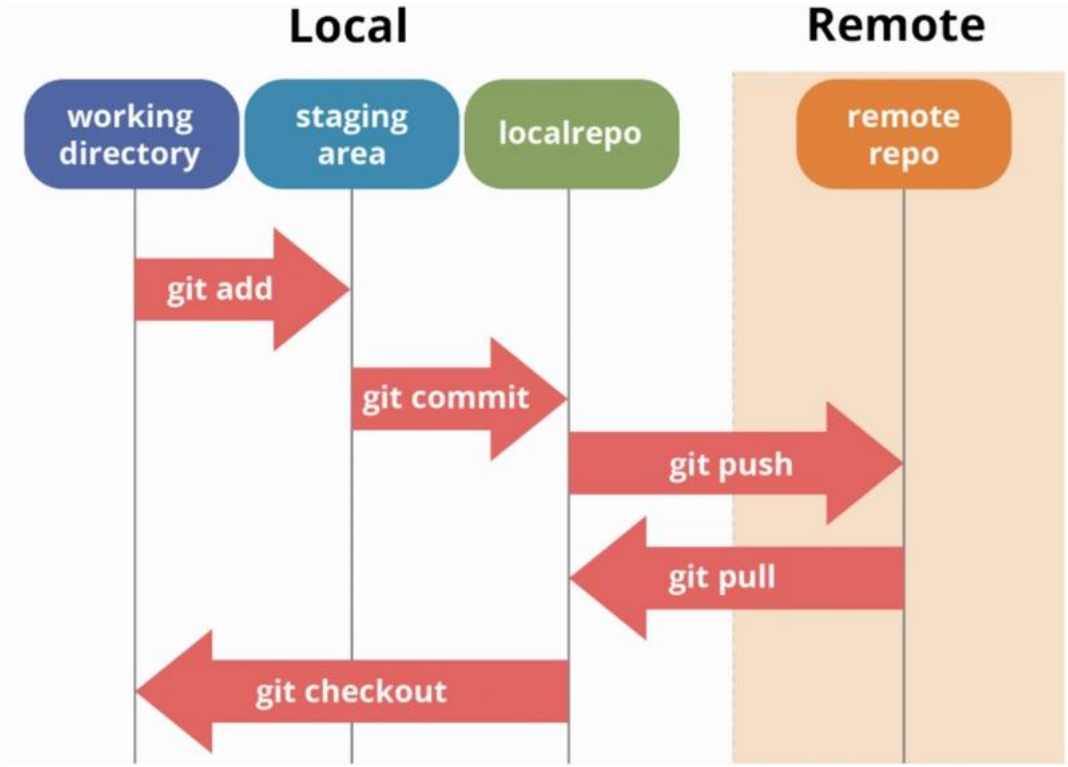
How to get started using Git and GitHub?

1. **Install Git** – https://git-scm.com/install/
2. **Create an account on GitHub** – https://docs.github.com/en/get-started/start-your-journey/creating-an-account-on-github
3. **Create an SSH-key and connect it to GitHub** – https://docs.github.com/en/authentication/connecting-to-github-with-ssh/adding-a-new-ssh-key-to-your-github-account

https://www.scaler.com/topics/git-vs-github/

Git Fundamentals

Core Workflow of Git



https://dev.to/mollynem/git-github--workflow-fundamentals-5496

4 key areas of Git (and GitHub)

Working Directory – contains your local project folder where your code and files live.

Staging Area – acts as a holding space for changes you are consider committing.

Local Repository – contains committed versions of your code.

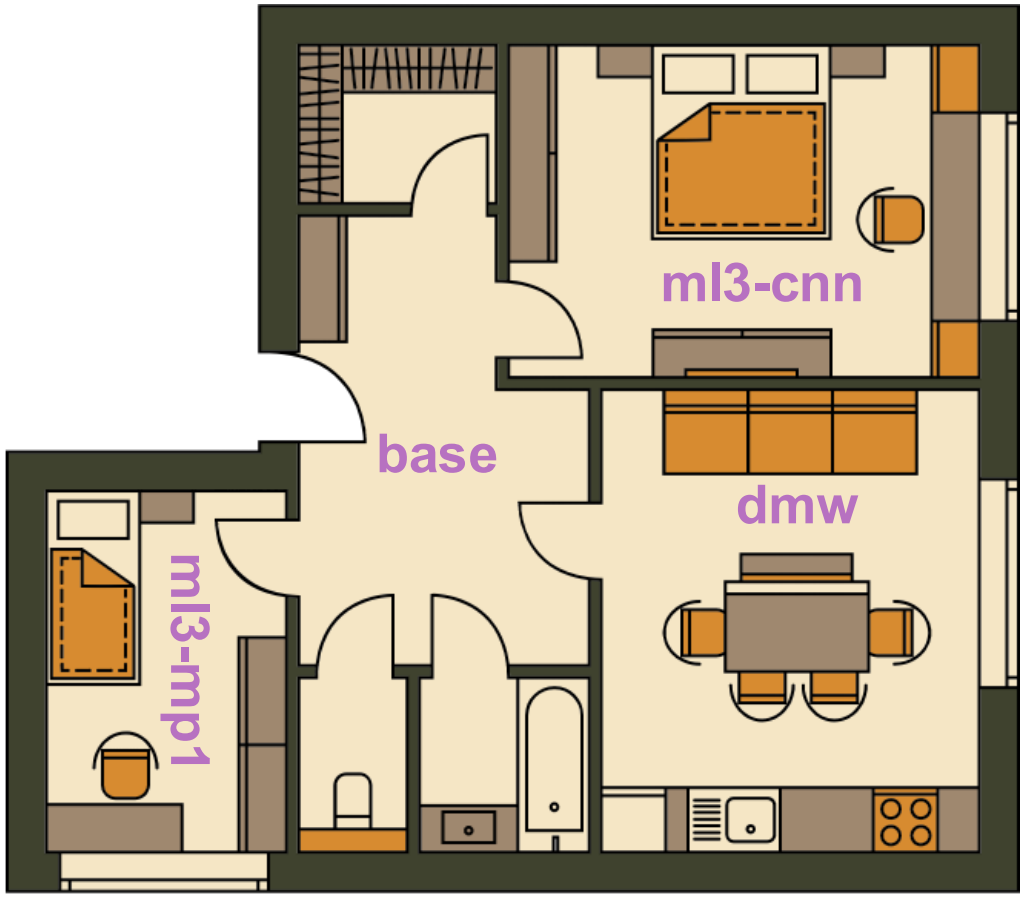
Remote Repository – where your Git repository is stored in the cloud.

Practical Git (and GitHub) Workflows

AIM

Python Environments

Python Environments

What are Python Environments?


An environment is a **self-contained space** where you can run and manage specific versions of Python and the accompanying libraries that you will use for your project.
